A common situation with 2 wires coming out of the wall: you can do this...
After installation of the front parts, the fixtures become a sculptural unity.
... or this.
No need for individual wiring for each fixture. A single feed wire suffices.

4 identical bases
4 bases put against each other.
Pictured luminaire has an overall diameter of 1,350 mm.
An interesting option for the model with a one-piece shade is to use the luminaire as a ceiling lamp.

This ceiling mounted luminaire has a particularly architectural appearance.

The hoopole receives an additional finishing disk at the bottom, which can be finished in the same color as the ceiling.

Behind the disk, there's plenty of space for fixations, drivers and connections.

A suggestion would be to apply magnet-fixation for the disk in order to avoid visible screws.
